"Pseudomonas aeruginosa possesses homologues of mammalian

"Phenylalanie hydroxylase and 4 alpha-carbinolamine dehydratase/DCOH
as part of a three-component gene cluster.";

Proc. Natl. Acad. Sci. U.S.A. 91:1366-1370(1994).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        -!- CATALYTIC ACTIVITY: L-phenylalanine + tetrahydrobiopterin + O(2) L-tyrosine + dihydrobiopterin + H(2)O.

             -i- PATHWAY: THIS IS THE RATE-LIMITING ENZYME IN THE BIOSYNTHESIS OF SEROTONIN IN THE CENTRAL MERVOUS SYSTEM AND CATALYZES THE FIRST STEP OF THE SYNTHESIS OF MELLAPOINI IN THE PINEAL GLAND.
-i- SUBDNIT: MULTIMER OF IDENTICAL SUBUNITS.
-i- ALTERNATIVE PRODUCTS: 2 ISOFORMS; 1 (SHOWN HERE) AND 2; ARE PRODUCED BY ALTERNATIVE SPLICING.
-i- TISSUE SPECIFICITY: ISOFORM 2 SEEMS TO BE LESS WIDELY EXPRESSED THAN ISOFORM 1.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          PHOSPHORYLATION (BY PKA) (POTENTIAL)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                12.2%; Score 230.5; DB 1; Length 444; 27.8%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           -!- CATALYTIC ACTIVITY: L-tyrosine + tetrahydropteridine + O(2) = 3,4-dihydroxy-L-phenylalanine + dihydropteridine + H(2)O.
-!- COPACTOR: FERROUS ION.
-!- ENZYME REGULATION: PHOSPHORYLATION LEADS TO AN INCREASE IN THE CATALYTIC ACTIVITY.
-!- PATHAMY: Catecholanine biosynthesis; first step.
-!- SIMILARITY: BELONGS TO THE BIOPTERIN-DEPENDENT AROMATIC AMINO ACID HYDROXYLASES FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    TIGREAMS; TIGRO1269; Tyr3 monoox; 1.

                                                                                                                          hydroxy-L-tryptophan + dihydropteridine + H(2)0.

COFACTOR: PERROUS ION.

PATHWAY: THIS IS THE RATE-LIMITING ENZYME IN THE BIOSYNTHESIS OF SEROTONIN IN THE CENTRAL MERVOUS SYSTEM AND CATALYZES THE FIRST STEP OF THE SYNTHESIS OF MELATONIN IN THE PINEAL GLAND.

SUBUNIT: MULTIMER OF IDENTICAL SUBUNITS.

SIMILARITY: BELONGS TO THE BIOFTERIN-DEPENDENT AROMATIC AMINO ACID HYDROXYLASES FAMILY.
                                                                                                                                                                                                                                                                                                                                                     _TaxID=10090;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 WYRLLSSRFSLWKSYCPRFFLDYLEAFGLLSDFLDH------QAVIKFFELETHFSYY 158

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Anton X.X., Manaster J.S., Kordower X.X., Markham X.X., Bredesen D.E.; Submitted (JUL-1993) to the EMBL/GenBank/DDBJ databases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 -!- CATALYTIC ACTIVITY: L-tyrosine + tetrahydropteridine + O(2) = 3,4-dihydroxy-L-phenylalanine + dihydropteridine + H(2)O.
-!- COFACTOR: FERROUS ION.
-!- ENZYME REGULATION: PHOSPHORYLATION LEADS TO AN INCREASE IN THE CATALYTIC ACTIVITY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            "Crystal structure of tyrosine hydroxylase at 2.3 A and its implications for inherited neurodegenerative diseases."; Nat. Struct. Biol. 4:578-588(1987).

-!- CATALYTIC ACTIVITY: L-phenylalanine + tetrahydrobiopterin + O(2) =
-Ltyrosine + dihydrobiopterin + H(2)O.
-!- COFACTOR: Binds 1 ferrous ion (By similarity).
-!- COFACTOR: Binds 1 ferrous ion (By similarity).
-!- PATHWAY: Catabolism of phenylalanine; first (rate-limiting) step.
-!- SIMILARITY: BELONGS TO THE BIOPTERIN-DEPENDENT AROMATIC AMINO ACID
HYDROXYLASES FAMILY. [1]

CATALYTIC ACTIVITY: L-tyrosine + tetrahydropteridine + C dihydroxy-L-phenylalanine + dihydropteridine + H(2)O. COFACTOR: FERROUS ION.

ENZYME REGULATION: PHOSPHORYLATION LEADS TO AN INCREASE CATALYTIC ACTIVITY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           SIMILARITY: BELONGS TO THE BIOPTERIN-DEPENDENT AROMATIC AMINO ACID HYDROXYLASES FAMILY.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Waterston R.;
Submitted (NOV-2001) to the EMBL/GenBank/DDBJ databases.
-!- CATALYTIC ACTIVITY: L-tyrosine + tetrahydropteridine + O(2) = 3,4-dihydroxy-L-phenylalanine + dihydropteridine + H(2)O.
-!- COFACTOR: FERROUS ION.
-!- PATHWAY: Catecholamine biosynthesis; first step.
-!- PATHWAY: BELONGS TO THE BIOPTERIN-DEPENDENT AROMATIC AMINO ACID HYDROXYLASES FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             15-JUL-1998 (Rel. 36, Created)

-1- SUBUNIT: CONSIST OF THREE SUBUNITS; RECE AND RECD (BY SIMILARITY).
-1- SIMILARITY: BELONGS TO THE HELICASE FAMILY. UVRD SUBFAMILY.
                                                                                                                                                                                                                  Shiral M., Hirakaw H., Kimoto M., Tabuchi M., Kishi F., Ouchi K., Shiral M., Hirakaw H., Kimoto M., Tabuchi M., Kushi F., Ouchi K., Shiba T., Ishii K., Hattori M., Kuhara S., Nakazawa T.; Comparison of whole genome sequences of Chlamydia pneumoniae J138 from Japan and CWLO29 from USA.", Nucleic. Acids Res. 28:2311-2314 (2000).

-!- PUNCTION: REQUIRED FOR EFFICIENT DNA REPAIR; IT CATALYZES THE UNWINDING OF DOUBLE-STRANDED DNA AND THE CLEAVAGE OF SINGLE-STRANDED DNA AND IT STIMULATES LOCAL GENETIC RECOMBINATION.

ALL OF THESE ACTIVITIES REQUIRE CONCOMITANT HYDROLYSIS OF ATP (BY SIMILARITY).
